## Step 1: Connect Heroku Account to Github

- To begin the deployment process, ensure that your Heroku account is connected to your GitHub repository.

## Step 2: Deploying the Branch Where Your Application is Stored

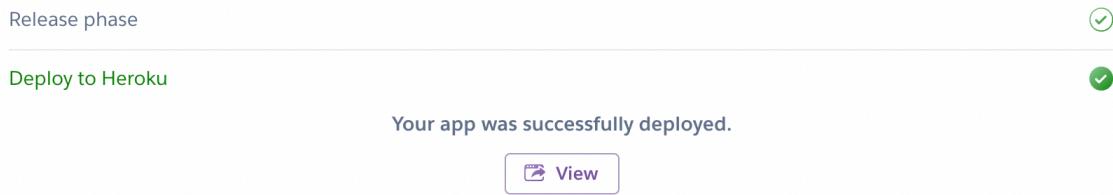

- Navigate to your Heroku dashboard.
- Select the option to deploy your application.
- Choose the specific branch where your application code is stored.

### Step 3: View Your Application

Once the deployment process is initiated, you can view your application by following these steps:

- Access your Heroku dashboard.
- Locate and click on the deployed application.
- This will open the live version of your application.

## Final: The App is Successfully Deployed

- Upon completing the deployment steps, your application should now be successfully deployed on Heroku. You can access and interact with the live version by visiting the provided URL.
